Dear Mr. Stefani:

We have reviewed the April 24, 1989 results of the Hydrogeological Investigation for the Pier 91 facilities conducted pursuant to the June 30, 1988 RCRA 3013 Order. Our technical comments on this report were transmitted to you in a letter dated August 31, 1989. The majority of these comments concerned the insufficient characterization of the subsurface contamination at the site. Since corrective action is warranted at the Pier 91 facility and further groundwater investigation work will be required these comments can be addressed as part of the RCRA Facility Investigation.

Therefore it is our determination that the requirements of the June 30, 1988 3013 order have been satisfied. Should you have questions regarding this facility contact Bill Adams of my staff at (206) 442-2806.

Sincerely,

Michael F. Gearheard, Chief
Waste Management Branch
